

Transportation Infrastructure

Highway Design between Boğazlayan - Çandır - Çayıralan

Client General Directorate of Highways

Work Period 24.04.2012 -03.12.2015

Services provided Geodesy services
Highway design
Design of engineering structures
Feasibility and research studies
Traffic design
Preparation of final report

Technical Details 41 km long route between Boğazlayan-Çandır-Çayıralan consists of 4 bridges (1116 sqm) design. The project covers the following design disciplines:

✍ **Geodesy works:** Determination of check-points and approval of the Client, Assign of check-points and related measurements, calculations. Calculations for coordinate transformation and submittal of supervision reports to the Client, Land survey and to form digital geodesic model.

✍ **Highway design:** Design of geometrical components and preparation of the report, Hydraulic and hydra-geological surveys, Cross-section drawings, determination of retaining walls, cut-fill and bruckner calculations, Determination of intersections and connection ways, drawings of plan-profile and details, Drainage design and related drawings, Preparation of final report and quantity survey, Submittal of Final Design for the approval of the Client

✍ **Engineering Structures:** Preparation of preliminary and final design for bridges, flying-overs, underpasses, culverts, etc.

✍ **Feasibility and research studies:** Geological survey and report, Hydra-geological survey and report, Engineering geology survey and report, Geological-geotechnical research programme and applications, Geological-geotechnical survey and design report, Geotechnical design report, Superstructures survey and design report

✍ **Traffic design:** Traffic design report and quantity survey, submittal to the Client

✍ **Final Report:** Preparation of final report and submittal to the Client
